GEBO.AI SETUP GUIDE · INTEGRATIONS · PAGE 9

Jira

Give Gebo.ai an Atlassian account that reads your Jira Cloud projects: issues, comments and attachments become searchable.

TIME	5 minutes.
YOU NEED	An Atlassian account that can read the projects, its API token (the same token as for Confluence) and your Jira address.

1 Enter the credentials

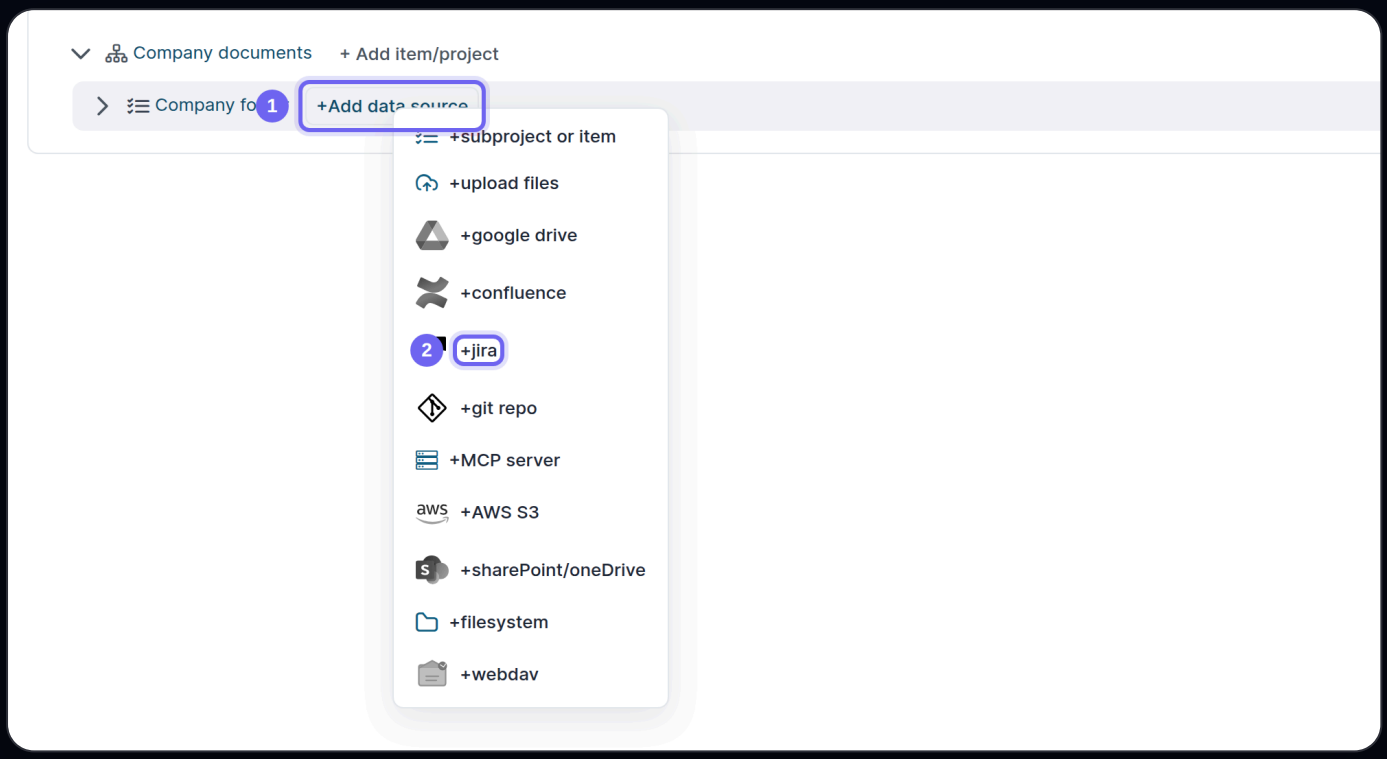
In **Setup** → **Enterprise integrations** click **Atlassian jira integration**, then **+ Jira system**.

A new Jira system.

1. **Base internet address:** `https://yourcompany.atlassian.net`.
2. **jira username:** the e-mail of the Atlassian account.
3. **jira cloud api key:** the API token of the account (Atlassian account → Security → API tokens).
4. Click **Create**. Gebo.ai logs into Jira before saving.

2 Then add the data source

In **Admin** → **Knowledge bases & projects**, **+Add data source** → **+jira**: pick the Jira system, the projects to index and **Publish!**, as in step 5.



+Add data source (1), then **+jira** (2).

← Confluence

Next: SharePoint and OneDrive →
