GEBO.AI SETUP GUIDE · MONITORING · PAGE 22

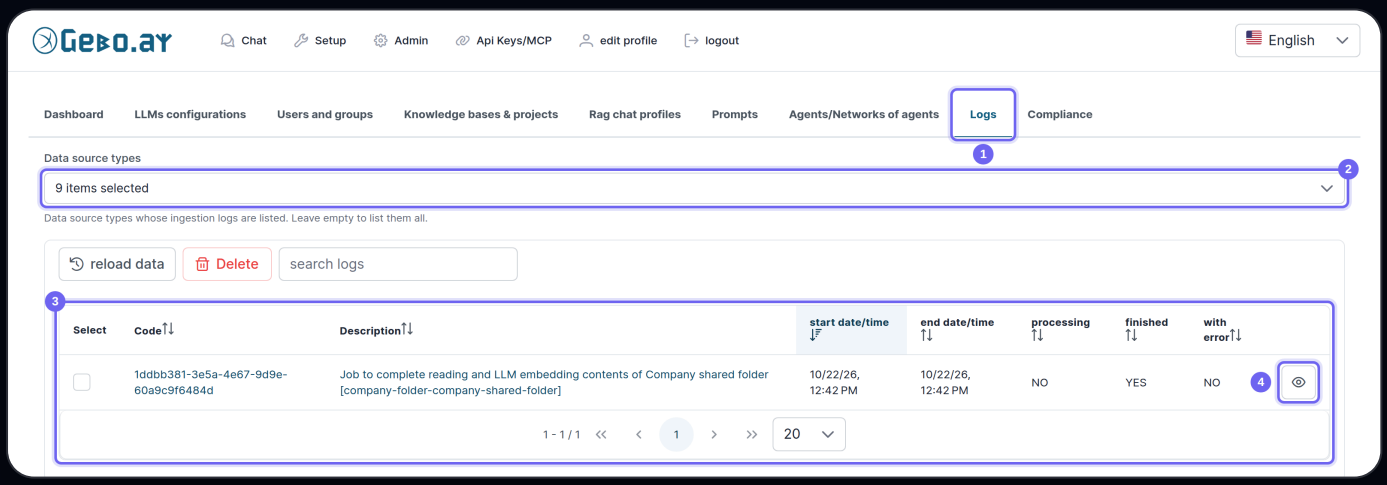
Ingestion runs and their logs

Every publish and every scheduled sync of a data source is a run. The Logs tab lists the runs of all the data sources, with their outcome and the log of each.

WHERE	Admin → Logs.
YOU NEED	An administrator account.

1 Find the run

In **Admin** open **Logs** (1). **Data source types** (2) limits the list to some kinds of data source; empty, it lists them all.



The runs (3) and the button that opens the log of one (4).

Each run (3) shows when it started and ended, and whether it is still **processing**, **finished** and **with error**. **reload data** refreshes the list and **search logs** filters it.

2 Open its log

The eye (4) opens the log of the run, the same view that opens after **Publish!** in step 5: the documents received and processed at each stage, and the errors with their reason.

Delete removes the logs of the runs ticked under **Select**.

One data source at a time

The **Logs** tab of a data source lists only its own runs (step 6).
